SUMMARY

Full Stack Software Engineer with 3 years of experience building enterprise SaaS products using React.js, Next.js, Node.js, NestJS, GraphQL, PostgreSQL, and AWS. Lead developer on a global platform used by 2,500+ consultants across 80+ countries and 6,000+ organizations, owning releases end to end and building the core reporting system used to generate paid assessment reports. Experienced in REST and GraphQL API development, third-party integrations, performance optimization, and AI-assisted development workflows using Claude Code, MCP, and Cursor AI.

TECHNICAL SKILLS

Languages	JavaScript (ES6+), TypeScript, Python, SQL
Frontend	React.js, Next.js, Redux Toolkit, HTML5, CSS3, Ant Design, Chakra UI, Bootstrap, Glass UI
Backend	Node.js, Express.js, NestJS, REST APIs, GraphQL, Hasura, RAG APIs
Databases	PostgreSQL, MySQL, MongoDB, Redis
Cloud & DevOps	AWS (EC2, RDS, S3, CloudWatch), Docker, CI/CD, GitHub Actions, Bitbucket Pipelines, Git
Integrations	QuickBooks API, DocuSign, Keycloak, Microsoft 365, OAuth, JWT
AI Tooling	Claude Code, Claude Desktop, MCP (Model Context Protocol), Anthropic, Cursor AI
Tools	Jira, Git, GitHub, Bitbucket

EXPERIENCE

Software Engineer | Code District, Lahore, Pakistan Jun 2024 to Present

- Optimized a production GraphQL endpoint, reducing 281 separate queries to a single query with in-memory aggregation, cutting execution time from 196 seconds to 5 seconds (39x improvement).
- Served as core developer on a global SaaS platform for 2,500+ consultants across 80+ countries and 6,000+ organizations.
- Managed 8+ release cycles end to end (branch strategy, QA, UAT, staging, and production deployment) with zero post-release regressions.
- Built 20+ reusable React.js and Ant Design components, including a dynamic filtering system with 15+ criteria used by consultants to generate paid assessment reports.
- Developed Node.js and NestJS REST APIs integrating QuickBooks, DocuSign, Keycloak, and Microsoft 365 for payments, document signing, authentication, and automated email delivery.
- Wrote complex SQL using CTEs and multi-table joins across 10+ PostgreSQL tables to optimize high-traffic reporting workflows; GraphQL via Hasura served as the primary data layer.
- Built a virtualized list component using react-window and react-virtualized with custom scroll handling, AutoSizer, and React.memo/useMemo/useCallback optimizations for a high-row-count demographics selector.
- Diagnosed and resolved a multi-layer authentication bug in the admin impersonation flow by identifying two separate root causes with DevOps.
- Removed an outdated data persistence layer across 12+ files, resolving a recurring class of filter bugs with zero production disruption.
- Designed and led the BVC Context Store, an internal Claude Code knowledge hub covering 6 microservices with 13 custom skills, 3 slash commands, and an automated SQL migration enforcement pipeline.
- Authored the team's React best practices guide, adopted by 6 to 8 developers, and onboarded 2 new developers through code reviews and pair debugging.

- Integrated QuickBooks API with Monday.com to automate workflow sync, removing manual data entry from daily operations.
- Built a Node.js authentication system using JWT with role-based access control and session management, plus REST API integrations with multiple third-party services.

KEY PROJECTS

BVC Context Store | Claude Code, MCP, Bash, Python

- Designed and built a Claude Code context hub for the BVC platform covering 6 microservices, giving the team structured access to architecture, guides, and workflows without reading the full ~8,450-line documentation set.
- Authored 13 custom skills and 3 slash commands (16 invocable tools, ~400 lines) covering cross-repo tracing, debugging, deployment impact analysis, Hasura action tracing, log investigation, and PR description generation, with model overrides assigned per task complexity.
- Defined the SQL migration format standard and built a 93-line shell-based format checker enforcing ticket headers, schema-qualified table references, keyword casing, and indentation rules.
- Built a git pre-commit and pre-push hook that intercepts staged migration files, runs the format checker, and blocks non-compliant commits before they reach the repository.
- Designed a 10-scenario evaluation suite with rubric-based scoring to measure AI-assisted engineering output accuracy, codified into a 6-rule context economy policy for narrow, efficient retrieval.

ConnectXpert | React.js, Node.js, MySQL, WebRTC, Socket.io

- Built a real-time enterprise communication platform with video/audio calling, screen sharing, and group calls using WebRTC, with AI-driven auto-transcription, meeting summaries, chat grouping, and a scalable architecture supporting live reactions and compliance tracking.

TaskNest | NestJS, TypeScript, PostgreSQL, TypeORM, JWT

- Developed a modular REST API with JWT authentication, role-based access guards, TypeORM integration, and full CRUD task management following clean architecture practices.

EDUCATION

Bachelor of Science in Software Engineering | FAST NUCES, Lahore

Graduated 2024

CGPA 3.63 | Cum Laude | Dean's List of Honor (Fall 2020 to Spring 2024) | Silver Medalist (Spring 2022)

CERTIFICATIONS & AWARDS

- AWS Certified Cloud Practitioner (CLF-C02), Amazon Web Services
- Claude Code 101, Anthropic Education, Apr 2026
- Introduction to Agent Skills, Anthropic Education, May 2026
- Introduction to Model Context Protocol (MCP), Anthropic Education, May 2026
- Dean's List of Honor, FAST NUCES, Fall 2020 to Spring 2024
- Silver Medalist, FAST NUCES, Spring 2022
